HK Style Mahjong

Work Experience

Bell Canada

Software Developer Intern

Mississauga, ON

July—August, 2018

- Developed a web application with [HTML](#) and [JavaScript](#) to automate [radio frequency](#) testing, with initial plans to be implemented for an incoming wave of [5G](#) wireless technology.
- Extensively tested the [quadAtten](#) module, a series of programmable radio attenuators, to ensure compatibility between the web application and the module's [API](#).
- Built a web stack on an [Ubuntu server](#) using the [Python-based Flask](#) microframework to host the web application for public use.
- Deployed the final product on [Kubernetes](#) with enterprise [GitLab CI/CD](#) pipeline support.

Network Technician Intern

July—August, 2019

- Efficiently managed and reconfigured a section of the Top-of-Rack ([ToR](#)) spanning network in a lab environment, facilitating a [cloud infrastructure expansion](#).
- Swiftly picked up the fundamentals of [network architecture](#) to organize network sessions, VLANs, and IP routing to fulfill the team's demands.
- Monitored traffic between cloud compute servers using [APCON](#) traffic analyzer for application troubleshooting purposes.
- Demonstrated meticulous [attention to detail](#) when taking inventory, rerouting cables, and documenting changes as part of the expansion of the team's cloud computing network.

Projects (on GitHub)

iFollow

October—December, 2019

- Built a smart storage cart that follows its user [autonomously](#) using [Arduino](#) hardware programmed in [C](#).
- Created an [Android](#) app that relays GPS data from the user's phone to the smart cart via Bluetooth.
- Developed several [algorithms](#) to calibrate the GPS module at runtime and to determine the optimal path to the user.
- Used [Git](#) for version control among the team and for resolving programming issues.

ViBE

Ongoing

- An app that determines the chord progression to a piece of music.
- Implemented a basic [pitch detection algorithm](#) in [Python](#).
- Currently training a [TensorFlow](#) model to improve the accuracy of the algorithm.

Education

University of Waterloo

Candidate for Bachelor of Software Engineering

Waterloo, ON

September, 2019—Ongoing

- Received President's Scholarship of Distinction upon admission for an academic average exceeding 95% in high school.
- Relevant courses: Data Abstraction and Implementation, Digital Circuits and Systems, Introduction to Programming Principles (including Memory Management), Linear Algebra.

Markville Secondary School

Ontario Secondary School Diploma

Markham, ON

September, 2015—June, 2019

- Received York Region District School Board General Proficiency Scholarship for the highest academic average upon graduation.
- Additional awards for accomplishments in English, Computer Science, Mathematics, Physics, and Music.

Volunteer Experience

York Region District School Board

Music Teaching Assistant

Markham, ON

September, 2018—April, 2019

- Demonstrated [leadership](#) and [communication skills](#) by guiding an orchestra of 30 elementary school students through weekly rehearsals in preparation for a music festival.
